

High-Speed internet

is taking root in
Northumberland.

Northumberland County is excited
to announce that the Northumberland
Broadband Project is now
under construction.

- We've brought together a partnership of government and private investment to build a network that will give high-speed internet access to all Northumberland communities.
- This fast, reliable network will be your gateway to online education, smart farming, streaming entertainment, and new business opportunities.

Introducing Axle Telecom

Axle Telecom will build the Northumberland Broadband Project and provide internet services to residents and businesses.

They will be your main contact for this project at 1-844-702-2848 or axletelecom.ca

- Axle Telecom has extensive experience in providing fast, stable internet to rural communities in Ontario. This Canadian-owned telecommunications company is dedicated to connecting small, underserved communities.

How to Prepare

PHASE 1

Watch for Crews:

- Axle Telecom will start construction of the main network along municipal roads and road allowances.
- You may see construction crews in your neighbourhood setting up marker flags and digging to lay fibre cables.

PHASE 2

Give Consent to Fibre Installation:

To get high-speed internet, fibre needs to be installed up to your property so your rural home or business has access to the new network.

- Axle Telecom will be delivering a consent form to you. Signing the form* will allow Axle Telecom to bring network lines from the road up to your household/business.
- There is no charge for this and no obligation to you now or in the future to sign up for internet service. The goal is simply to make sure you have access to the network if you choose to get internet in the future.

* Note: Signing the consent form doesn't mean you're signing up for internet service yet. It just means you're giving permission for fibre installation so you can get network access, if needed - now or at any point in the future.

PHASE 3 (beginning this summer)

Choose to Sign Up for High-Speed Internet:

- As the network is completed in your area, Axle Telecom will share details about internet service plans available to you.
- At that time, you can contact Axle Telecom to choose the plan that's best for your needs. Get ready for more reliable internet with fast internet speeds, stable connections, and streamlined infrastructure.

To find out more about High-Speed Monthly Internet Service Plans, contact Axle Telecom at
